[CIPP Model Evaluation of a Collaborative Diabetic Management in Community Setting](#)

Published On: December 22, 2016 | Pages: 029 - 034

Author(s): Thanakamon Leesri*, Wichit Srisuphan, Wilawan Senaratana, Taweeluk Vannarit, and Kittipan Rerkasem

Diabetic management requires a continuous assessment of performance, looking at successes and failures. Especially in community setting, the development of a Collaborative Diabetes Management [CDM], Low Sugar Volunteers [LSVs], core-community working group, vigorously participated in all community activities to manage diabetes disease and its relevance. ...

[Neurological Outcome in a Term Infant with Tentorial Laceration Leading to Subdural Haemorrhage Following Vacuum-Assisted Delivery: A Case Report and Literature Review](#)

Published On: December 30, 2016 | Pages: 035 - 037

Author(s): Hee Chan Kang and Suresh Chandran*

There is a paucity of literature on this potentially devastating side effect of vacuum-assisted delivery. We present here a significant subdural haemorrhage associated with tentorial tear following vacuum-assisted delivery that resolved with only supportive medical measures without resulting in any neurological deficits nor delays on thorough examination and formal ne ...

[Accidental Acute Poisoning of two Children by Paracetamol-Codeine \(1000 Mg/60 Mg\) Association - A Case Report](#)

Published On: March 12, 2016 | Pages: 005 - 007

Author(s): A Diallo*, M Eliassou, K Djadou, Y Potchoo and EE Creppy

Paracetamol is one of the most used drugs in the world. We report here two cases of children poisoning (less than 3 years old) who were accidentally administered an adult form of rectal suppository containing a combination of paracetamol-codeine (1000 mg/60 mg). The first child received a dose of 154 mg /kg of paracetamol and 9 mg/kg of codeine two times daily for 2 d ...
