[A comparative study to analyze the effect of planter fascia stretch and heel pad with moist heat in the patients of planterfascitis](#)

Published On: August 12, 2021 | Pages: 087 - 091

Author(s): Komal Razzaq, Umair Arif*, Iqra Tahir, Touseef-ur-Rehman, Asima Liaqat, Kaiynat Shafique and Hafiz Muhammad Almas Sabir

Background: This study investigated the effect of planter fascia stretch and heel pad with moist heat in the patients of planterfascitis among subjects aged 20-40. Planter fascia is a thickened fibrous sheet of connective tissue which begins from medial tubercle on undersurface of calcaneus and fans out joining to the metatarsophalangeal joints plates to form longitud ...

[Acute Flaccid Paralysis surveillance in Gaza Strip, Palestine](#)

Published On: August 07, 2021 | Pages: 081 - 086

Author(s): Khaled A Abu Ali*

Acute Flaccid Paralysis (AFP) is a clinical syndrome characterized by rapid onset of weakness, in the respiratory muscles, swallowing and limbs; and death because of respiratory muscles failure. AFP surveillance is crucial, the clinicians are required to notify AFP cases among children below 15 years old to the epidemiology department with completion of AFP surveilla ...

[Unilateral eyelid ptosis: A case report cured by Gelsemium sempervirens](#)

Published On: August 04, 2021 | Pages: 076 - 080

Author(s): Nur-E-Alam Rasel*, Md. Akther-uz-Zahan and Rumana Afroze Rume

Background: A 60 years-old man presented with an 8-day history of acute onset painless left upper eyelid ptosis covering the pupil entirely. Ptosis can affect unilateral or bilateral. He had no other symptoms; importantly pupils were equal and reactive and eye movements were full. There was no palpable mass or swelling. He had a headache but had no other focal neurolo ...

[Atypical Pyoderma Gangrenosum with Ulcerative Colitis treated successfully with prednisolone and mesalazine: A case report](#)

Published On: July 22, 2021 | Pages: 065 - 068

Author(s): Doaa AE Abou-Taleb*, Mahmoud F Sherif and Ahmed S Mohammed

Introduction: Pyoderma Gangrenosum (PG) manifests as recurrent deep ulceration of the skin and PG is often associated with a variety of systemic diseases, such as Inflammatory Bowel Diseases (IBD), inflammatory arthropathies, hematologic malignancies and hepatitis. There has been neither laboratory finding nor histological feature diagnostic of PG, and diagnosis of PG ...

[Complete response of merkel cell carcinoma with brain metastases to pembrolizumab and radiotherapy: A case report](#)

Published On: June 03, 2021 | Pages: 059 - 062

Author(s): Ansgar Koechel*, Franz-Joachim Hilke, Bernhard Klumpp, Christopher Schroeder, Thomas Eigentler, Diana Lomberg, Claus Garbe and Ulrike Leiter

Merkel cell carcinoma is a rare, but highly malignant and fast growing skin-cancer with high recurrence-rates, deriving from endothelial and neuroendocrine tissues. For advanced Merkel cell carcinoma prognosis is poor [1] and even under cytotoxic chemotherapy there is only a median progression-free survival of only 3 months [2,3]. Even though Merkel cell carcinoma fre ...

[Acute thrombosis during carotid artery stenting caused by stent-induced kinking](#)

Published On: May 10, 2021 | Pages: 053 - 055

Author(s): Magdalena Chrapkowska* and Andrzej Modrzejewski

A case of a 71-year-old man with previous Transient Ischemic Attack (TIA), treated with stent implantation due to right internal carotid artery stenosis. The procedure was complicated by stenosis and kinking of the vessel distal to the stent and thrombus formation. The flow in the stented artery was not restored. A massive stroke occurred. The man died on the

[Penetrating pharynx wound reaching mediastinum. Which is the proper surgical approach?](#)

Published On: May 03, 2021 | Pages: 050 - 052

Author(s): Rivero Fernández I*, Montojo Woodeson J, Sanz Rodríguez M, García Fernández A and Gavilanes-Plasencia J

We report the case of a knife penetrating wound from the hypopharynx-cervical esophagus area to the posterior mediastinum in a 91-year-old patient. The surgical approach for this patient required a transoral examination with direct laryngoscopy and a right cervicotomy. Although it was not necessary to perform a thoracotomy, the position of the knife, stuck towards the ...

[COVID-19 Pandemic: Past, present and future](#)

Published On: June 03, 2021 | Pages: 056 - 058

Author(s): Behailu Assefa*

COVID-19 is the emerged pandemic disease of mankind. This disease yet has no proven therapy. Measures like the use of a vaccine, chemical spray, disinfectants, antiseptics, and supportive therapies could help control this disease that is caused by a coronavirus. Further effective control and prevention measures are urgently demanded to save the life of billions of the ...
