[Microbiological evaluation of meat sold in butcheries shop of Cheleleka town in anchar woreda, West Harerge, Oromia, Ethiopia Western Ethiopia](#)

Published On: November 05, 2021 | Pages: 033 - 039

Author(s): Wazir Shafi Mustefa*

Food borne infections and disease are a main international health problem with consequent economic loss and deaths. Meat is considered the most vital source of proteins consumed by humans, so far, most perishable. For highly consumable foodstuffs such as fresh red meat, the hazard of food poisoning is mainly high since it contains all the nutrients that support bacter ...

[Study of radiocesium contamination from Chernobyl accident in samples of black blueberry jams](#)

Published On: June 11, 2021 | Pages: 018 - 024

Author(s): Chiara Cantaluppi*, Daniele Zannoni and Massimo Calabrese

More than 30 years after the Chernobyl accident, foodstuff based on black blueberries (*Vaccinium myrtillus*) with relevant ¹³⁷Cs activity concentrations are still found in the European Union market. Recently, mass media reported that food products based on black blueberries produced in UE were rejected by Asian markets because the ¹³⁷Cs activity concentration was great ...

[Effect of curing condition on shelf life of fresh potatoes storage in Easter Hararghe zone of Oromia region](#)

Published On: March 24, 2021 | Pages: 011 - 017

Author(s): Tashome Urge Jiru* and Ibsa Aliyi Usmane

The quality of potato and its storage life is reduced by the loss of moisture loss, decay and physiological breakdown. These deteriorations are directly related to storage temperature, relative humidity, air circulation and gas composition. Curing process which is hardening the skin of potatoes and Bruise prevention is an important part of keeping quality of potatoes w ...
