Continuous versus step by step training for learning surgical anatomy on an open inguinal hernia model

Abstract View  Full Article View  Additional File(s)  DOI: 10.17352/2455-2968.000082

Perforation as a cause of failure in the conservative treatment of acute cholecystitis: Is percutaneous cholecystostomy a sufficient treatment?
Purpose: To evaluate the efficacy and safety of percutaneous cholecystostomy in acute cholecystitis cases with high surgical risk that were treated conservatively and developed perforation.

Metabolism, inflammation and postoperative time are the key to early diagnosis of anastomotic leak

Closed removable thread vascular anastomosis stent (Lasheen Vascular Stent)

Internal urethral stent (Lasheen urethral stent) for hypospadias repair
Author(s): Ahmed E Lasheen*

Background: Hypospadias is a relatively common congenital defect of the male external genitalia. There is much controversy about using of the urethral stent with hypospadias repair. Our study offers new urethral stent (Lasheen urethral stent) to facilitate repair procedure, more comfortable, and improve outcome. ...

**General surgery under limited conditions on the Syrian border**

Published On: August 05, 2019 | Pages: 066 - 067

Author(s): Mustafa Senturk*

Aim: People living in the countryside are less to have access to health care than those Living in the city center. In addition to this, when migrants are added, it becomes more difficult to use health services. Although 20% of the US population lives in rural areas, only 9% of physicians work in these areas, and general surgeons seem to be inadequate in small ru ...

**Distal foot reconstruction using distally based first web flap: A case series**

Published On: July 31, 2019 | Pages: 061 - 065

Author(s): Ram Mohan, Naveen Kumar*, Manoj K Jha, Umesh N and Anchit Kumar

Background: The reconstruction of distal foot for various defects or contractures mainly over or near the toes has always been a difficult task. A flap distally based on first web space is dependent upon a perforator arising from the the distal communicating artery between the first dorsal and plantar metatarsal arteries, can be used for the coverage of the toe ...

**Antiemetic prescribing patterns for post-operative surgical patients**

Published On: July 11, 2019 | Pages: 051 - 055
Background: Post-operative nausea and vomiting is a common occurrence amongst surgical patients. Anecdotal reports suggest antiemetic prescribing patterns to be an area for improvement. Aim: To report the most commonly prescribed antiemetic agents in a major tertiary teaching hospital in Australia; and to assess medication dosage and compared to the current ratio ...

Peripheral facial paralysis

Peripheral facial paralysis causes asymmetry of the face affecting the upper and lower territories. Its management requires the completion of an initial clinical assessment in order to specify the topography, the severity of the involvement, the etiological nature and the possible complications. The knowledge and the mastery of the anatomo-physio-pathological bases ...

Rehabilitation of a patient with palatal defect- A case report

Defects in the jaw and face area are caused by congenital anomalies and some infections. In this study, we present a case of palatal insufficiency after maxillectomy, treated with shutter which was applied to ensure the aesthetics, phonation and functional deficiency of the patient. ...
Epicardial adipose tissue in a coronary artery disease patient

Published On: October 30, 2019 | Pages: 086 - 086

Author(s): Sibashankar Kar*

Thick Epicardial Adipose Tissue (EAT) is not always a finding at operation theatre in patients undergoing Coronary Artery Bypass Grafting (CABG). But epicardial fat has a direct relationship with obesity and metabolic syndrome. Its presence is an independent risk factor for Coronary Artery Disease (CAD). ...

Cutaneous syncytial myoepithelioma: A potential pitfall in the differential diagnosis of superficial dermal tumors

Published On: September 13, 2019 | Pages: 074 - 077

Author(s): Erdem Comut* and Nese Calli Demirkan

In the spectrum of myoepithelial tumors of the skin, cutaneous myoepithelioma is composed solely of myoepithelial cells. Cutaneous syncytial myoepithelioma as a rare histological variant of cutaneous myoepithelioma has been first described in the last decade. This tumor is benign and rarely shows recurrence when incompletely resected. ...
