[The dual mobility hip arthroplasty for hip fracture in Parkinson's disease](#)

Published On: June 29, 2020 | Pages: 032 - 035

Author(s): Ayman Abdelaziz Bassiony* and Saleh Gameel

Background: Patients with Parkinson's disease are at increased risk for falls and associated hip fractures as a result of tremor, rigidity, and postural instability. The available literature is limited and conflicting regarding the optimal surgical treatment and risk for postoperative complications and mortality in this unique patient population. This study question th ...

[Trauma Resuscitation Time at A Tertiary Care Hospital in Oman: A Retrospective Observational Study](#)

Published On: June 12, 2020 | Pages: 028 - 031

Author(s): Maysa Al-Maawali, Salim Al Rawahi* and Hani Al-Qadhi

Introduction: Trauma is an important worldwide public-health problem. This study aims to evaluate the median trauma resuscitation time (TRT) at Sultan Qaboos University Hospital (SQUH), Oman, and to investigate the reasons for delay in trauma resuscitation. Documenting TRT can be utilized to assess areas of improvement for trauma team performance, ensuring a high-qual ...

[Obese trauma patients who sustain orthopaedic fractures experience increased length of stay, ICU admissions and mortality](#)

Published On: March 28, 2020 | Pages: 004 - 011

Author(s): Brendan R Southam*, Katherine A Bowers, Kevin P Smidt, Jane C Khoury, Mekibib Altaye, Michael T Archdeacon and Frank R Avilucea

The rising trend of obesity in the United States has been a growing concern within the healthcare system for decades. Since the early 1960s, the prevalence of obesity has more than doubled among U.S. adults, and one out of every three Americans is now considered obese according to the National Health and Nutrition Examination Survey [1,2]. Significant medical comorbid ...

Case Report

[Transepiphyseal separation of distal humerus: A case report and review of literature](#)

Published On: June 08, 2020 | Pages: 025 - 027

Author(s): Dinesh Dhar*

Transepiphyseal Fracture of Distal Humerus (TFDH) or epiphysiolysis of distal humerus is a rare injury seen in children younger than three years of age [1]. It is the least commonest of all physeal injuries representing 3.9% of them in this age group [2]. The reported incidence of this injury is 1:35000 births [3]. The diagnosis of this condition is very challenging ...
